

New Lureking Bed bug traps

Insect monitors from Russell IPM

Lureking

Enhanced, ready to use traps with an integrated, improved attractant.

Introducing our new Lureking bed bug traps, offering protection before, during and after treatment. The discreet Lureking bed bug monitor can be slipped under or behind a bed, behind curtains or easily hidden in tight spaces around furniture.

The Lureking traps are a safe and nontoxic solution to monitoring bed bugs. Once assembled there is no need to add a lure as it is already included in the glue.

The rough card exterior on the ramps enables the bed bugs to climb easily into the trap. The shiny card surface on the inside prevents them from escaping.

The traps are highly effective for detecting low level populations before they get out of control. Checking and marking the monitors weekly can help with early detection to alert pest controllers of the need for treatment before the population increases. They are ideal for locating problem areas of harbourage, enhancing control efforts and alerting pest controllers to areas/rooms where they need to intensify treatments.

When a bed bug is caught, the Lureking trap becomes even more effective as the trapped bed bugs give off an aggregation pheromone which attracts other bed bugs.

Ideal for use in hotels, apartments, student accommodation, nursing homes, hospitals, luggage storage, vehicles, cruise ships and planes.

Trap. Monitor. Protect.
